

# Modernization Risk Review

Use this for .NET, SQL, Web Forms, Classic ASP, VB.NET, or rule-heavy systems.

## Checklist

- Map stored procedures and reports
- Identify hidden business rules
- Create parity scenarios
- Design service seams
- Define rollback plan
- Assign test ownership
- Separate modernization from AI features

## Boundary

Checklist output is informational. It does not authorize model execution, private-network probing, production writes, compliance certification, or vendor-partner claims.
